

Trial Testing 2. GNS

- There is a planet which has a numeric structure different from ours. They use values between 0~9 for their strings.
- Write a program which returns strings by making an array of numbers in order from the smallest after receiving strings of mixed words that indicate values from 0 to 9.

16508246

Explanation

■ About input strings

- N : the total number of the numbers represented as a string
- M : the length of the numbers represented as a string
